EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Paul D. Greeley (Reg. #31, 019) at 203-327-4500 on May 5, 2005. The purpose of the examiner's amendment was to correct informalities in the specifications, drawings and claims.

2. The application has been amended as follows:

IN THE CLAIMS:

In claim 1:

- Line 1: "a narrow-band amplifier comprising" has been deleted.
- Line 10: "signals" after "wave" has been replaced with -- signal --.
- Line 12: "signals" after "wave" has been replaced with -- signal --.
- Line 14: "signals" after "wave" has been replaced with -- signal --.
- Line 16: "signals" after "wave" has been replaced with -- signal --.

IN THE DRAWINGS:

The following changes to the drawings have been approved by the examiner and agreed upon by applicant:

• In FIG.1: "580" on the top right has been replaced with -- 560 --.

Application/Control Number: 10/817,090 Page 3

Art Unit: 2858

All empty boxes such as 310, 400, 510, 520, 530, 540, 620, 630, 660, 670, 680, 700, 920, 930, 951-954 and 1000 in FIGS. 1-4 need suitable descriptive legends (see MPEP §608.02 [R-2], Section V: DRAWING STANDARDS, item (n) and (o)).

In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

IN THE SPECIFICATIONS:

• Page 19, line 19: "900" has been replaced with -- 910 --.

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance:

With regard to claims 1 and 5, the prior art does not teach or render obvious the combinations as claimed narrow-band amplifier and claimed impedance measuring apparatus including:

- A narrow-band amplifier comprising a quadrature detector, integrators, a vector modulator, and two pairs of signal sources wherein each signal source in each pair is orthogonal to each other; and
- A controller controls the signal sources before the time when they are about to be synchronized by the pre-determined wait times so that the times when the output signals of signal sources are updated are all synchronized.

With regard to claim 9, the prior art does not teach or render obvious the combinations as claimed impedance measuring apparatus including:

Application/Control Number: 10/817,090 Page 4

Art Unit: 2858

 A narrow-band amplifier comprising a quadrature detector, integrators, a vector modulator, and two pairs of signal sources wherein each signal source in each pair is orthogonal to each other; and

 A control means adjusts the phase difference between first sine-wave signals and second sine-wave signals by controlling the first signal source and adjusts the phase difference between first cosine-wave signals and second cosine-wave signals by controlling first signal source.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
